SHOP STANDARD 2.0

The All New Shop Standard 2.0 Line offers four (4) large cabinet sizes from the Media Blast® Industrial Line of machinery with a smaller 100% welded negative pressure dust collector half the filter size as true Industrial. The Industrial Cabinet construction allows access to many options used to save maintenance and operator part handling time.

AVAILABLE

The Shop Standard 2.0 is a dry, siphon blasting cabinet made from 100% welded 12 and 14 gauge cold rolled steel.

Available in four (4) sizes to accommodate a variety of applications using a 5/16" (25 cfm) gun size for faster part processing when daily operation is not needed or required.

The older Shop Standard was one of the first models designed in 1977 using progressive bag dust collector and now redesigned in 2018 to use the advanced negative pressure cartridge filtration dust collector used in all Media Blast siphon and direct pressure production blasting cabinets.

The Shop Standard 2.0 offers three (3) ways to clean the dust collector; Vibrator, Air Pulse or both at the same time. These cabinets are larger, deeper, wider and taller fully loaded with machine features; 100% welded steel cabinet construction with cleaner no spill door construction. It includes the new cartridge dust collector technology using all negative pressure dust collector construction, semi-automatic pneumatic vibrator cleaning cycle with air pulse cleaning using 90 square feet of MERV tested and certified cartridge filtration. This model has the blower on the clean side of the filters. An optional Blower Silencer is available for reduced blower exhaust noise level.

The All New Shop Standard 2.0 gets you one step closer to Production machine durability without the Production machine cost.

All New Shop Standard 2.0

- 13-1/2" x 15-1/2" View Window, Safety Glass
- Low Static Window Protector Glass
- Advanced LED Lighting
- 8" Work Ports
- All Air Controls
- Blow-Off Gun
- Abrasive Flow Control Mixing Valve
- Tungsten Carbide Nozzle
